

What can I expect from laser treatment?

Painless relief

Some patients report a slight sense of warmth or lightness as circulation is improved and muscles relax, others report no particular sensation during Nexus laser treatment.

No side effects

Nexus laser therapy facilitates the natural healing responses of the body, and does not add any biochemical, mechanical or neurological stress to the healing process. The only “side effects” of laser therapy are the natural effects of healing: the return of function and mobility in damaged joints and muscles, the return of sensation in damaged nerves, the reduction of pain.

Quick results

Some patients experience pain relief or increased mobility or improved strength or other symptom relief from the first treatment, while others experience relief hours or days later, or even only after the 2nd or 3rd treatment. The amount of pain or injury, the amount of time since the symptom began, and the cause of symptoms all affect the speed of results. Since there are no biochemical side effects blocking the body’s response to the light therapy, Nexus laser therapy tends to produce faster, and more progressive relief than many alternative therapies.

Testimonials from doctors

I have been using Nexus lasers for almost 2 years and they have significantly changed my effectiveness with my patients! I have a very heavy sports chiropractic practice with professional Olympic athletes and patients with chronic problems from heavy farm work.

Curt Draeger, DC

The advantages I notice by using the Nexus laser are the fast pain relief my patients experience and the ease of doing basic and advanced soft tissue procedures with no bleeding and much less chair time.

Joseph Tregaskes, DMD, MS

My patients enjoy pain relief with the Nexus laser treatments for plantar fasciitis and tendinitis cases. I am especially pleased with the clinical results I am obtaining when combining PRP

(Platelet Rich Plasma) injections with the Nexus for the more difficult to treat plantar fasciitis and tendinosis.

Franklin Polun, DPM, FACFAS

Why did I choose Laser Therapy?

...because I wanted pain relief!
